Ammar Kashif

416-859-9809 ammar.kashif@torontomu.ca LinkedIn GitHub

Summary

Computer Science co-op student with experience building data validation utilities, backend systems, and analytics workflows in enterprise and startup environments. Strong foundation in algorithms, statistics, and structured testing; proficient in Python/SQL/C++ and building secure, maintainable systems end-to-end.

Education

Toronto Metropolitan University **Sep 2023 – Apr 2027**
Bachelor of Science, Computer Science (Co-op) *Toronto, ON*
Relevant Coursework: Data Structures & Algorithms, Probability & Statistics, Linear Algebra, Operating Systems, Databases, Artificial Intelligence

Technical Skills

Languages: Python, C++, Java, SQL, JavaScript, TypeScript
Data & Analytics: NumPy, Pandas, Power BI, Azure Databricks
Backend/Web: Flask, Node.js, Express, React, REST APIs, OAuth 2.0
Databases: PostgreSQL, MySQL, SQLAlchemy
Tools: Excel (advanced formulas, pivot tables), Git, Azure DevOps
Systems/Practices: Linux, authentication, documentation, testing/QA, automation

Experience

Co-op Project Support Analyst – SaaS **Sep 2025 – Dec 2025**
Ontario Public Service – GovTechON (Enterprise Applications Branch) *Toronto, ON*
– Developed Python utilities for data validation, formatting, and repeatable workflow checks across structured enterprise datasets
– Automated recurring integrity checks to reduce manual review effort and improve consistency across reporting cycles
– Validated and prepared datasets powering Power BI dashboards sourced via Azure Data Factory and Databricks pipelines
– Supported release readiness through structured QA testing, documentation, and Azure DevOps work item tracking
– Built Excel-based KPI tracking models to support operational reporting accuracy and stakeholder visibility

Software Developer – IBM SkillsBuild Industry Project **Dec 2025**
Riipen (IBM SkillsBuild Program) *Remote, Canada*
– Developed and refined features for a client-facing web application in a milestone-driven delivery environment
– Integrated QR code functionality for controlled access flows and status display within core user journeys
– Performed functional testing and validation across key flows; documented implementation details for handoff

CTO & Co-Founder **Aug 2024 – Sep 2025**
MedPass (Signalyze) *Toronto, ON*
– Designed backend API architecture for secure, structured data exchange with consistent schema conventions
– Modeled normalized relational database schemas to support scalable storage and retrieval patterns
– Led sprint planning and technical execution; produced structured documentation to support maintainability

CEO & Software Developer **Jun 2024 – Present**
MAPs Digital *Toronto, ON*
– Led technical delivery and client implementations; translated requirements into scoped deliverables and repeatable workflows

– Coordinated a distributed team with clear tasking, reviews, and documentation to maintain quality and timelines

Projects

Financial Optimization Model – Riipen Industry Project **Jan 2026**
– Built Python-based scenario model evaluating cost/performance trade-offs across configurable input parameters
– Applied statistical reasoning to compare scenario outputs and interpret impact metrics for decision support
– Documented modeling assumptions and methodology for reproducibility and stakeholder review

COSA – Multi-Role Backend System (Flask, SQL) **May 2025**
– Developed multi-role backend system with SQLAlchemy relational models, role-based access control, and workflow logic
– Implemented authentication, session management, and optional two-factor authentication using PyOTP with QR setup
– Executed 40+ structured test cases across critical workflows to validate reliability and edge-case handling

Playlist Helper – AI-Powered Spotify Playlist Generator **Oct 2025**
– Built full-stack app generating playlists from natural-language prompts using OpenAI API and Spotify Web API
– Implemented OAuth 2.0 authentication (PKCE via NextAuth) with structured error handling and input validation
– Documented environment configuration and deployment steps for reproducibility and maintenance
